PROFESSIONAL SUMMARY

Applied AI/LLM Engineer with 3+ years of combined industry and research experience building NLP, speech recognition, and enterprise LLM systems.. Experienced in developing RAG pipelines, local LLM applications, FastAPI-based AI services, and end-to-end AI products. Developed a Persian ASR system using nearly 1,000 hours of speech data and contributed to peer-reviewed research in multilingual NLP and conversational AI.

PROFESSIONAL EXPERIENCE

AI Engineer | January 2026 – Present (full-time)

- AdanAI
- Fine-tuned and optimized a Persian ASR system based on Whisper large-v3 using nearly 1,000 hours of speech data, achieving approximately 12% WER on the Common Voice evaluation set.
 - Integrated the ASR model into Mellat Bank’s Dima AI Assistant and prepared it for additional enterprise speech-processing use cases.
 - Designed and developed an end-to-end AI-powered meeting management platform using FastAPI, PostgreSQL, React, Docker, local LLMs, and speech-processing technologies.
 - Owned the technical implementation across system architecture, backend APIs, database design, frontend development, AI integration, and deployment support.

AI Engineer | October 2025– January 2026 (full-time)

- freelancer
- Developed enterprise local-LLM solutions using Llama and Qwen models for internal users and subsidiary companies.
 - Built RAG pipelines with Qdrant, E5, BGE-M3, and Jina Embeddings v3, covering document ingestion, chunking, retrieval, reranking, and evaluation.
 - Designed FastAPI-based services for document question answering and enterprise knowledge access.
 - Implemented hybrid retrieval and reranking techniques to improve retrieval relevance.

AI Developer | November 2024 – November 2025 (full time)

- Dadmatech Co.
- Developed NLP pipelines for text classification, information retrieval, and domain-specific applications.
 - Fine-tuned LLMs and SLMs and implemented data preparation workflows including cleaning, normalization, tokenization, and labeling.
 - Built RAG-based solutions using transformer models, embeddings, and vector search.
 - Evaluated model performance, performed error analysis, and integrated AI models into backend services.

AI Developer | October 2024 – November 2025 (Project_based)

SCP Tech Co.

- Developed large-scale NLP classification models for sentiment analysis, content polarity detection, and toxic-content identification.
- Processed approximately 15 million Persian and multilingual text records and evaluated models against publicly available benchmark datasets.
- Integrated trained classification models into a production data-labeling pipeline connected to Elasticsearch.
- Applied preprocessing, feature engineering, model evaluation, and post-processing across the production labeling pipeline.

AI Developer | July 2023 – January 2024 (Part-time)

Smart Vali

- Developed deep learning and computer vision models for agricultural product classification.
- Built image classification models for saffron components, date varieties, and fig recognition.
- Applied preprocessing, feature engineering, and model optimization techniques for agricultural image classification.

Research Assistant

University of Tehran | December 2025 – Present

- Conduct research in multilingual NLP, emotion classification, multimodal language technologies, and evaluation benchmarks.
- Co-author research papers published in ACL-affiliated workshops and SemEval.
- Collaborate under the supervision of Dr. Hesham Faili and Dr. Hadi Veisi.

Iran University of Science and Technology | February 2023 – January 2025

- Conducted research on conversational AI and NLP-based mental health support systems.
- Developed and evaluated a psychological health chatbot for detecting users' mental states and supporting recovery-oriented interactions.
- Co-authored "Psychological Health Chatbot: Detecting and Assisting Patients in Their Path to Recovery."
- Conducted research under the supervision of Dr. Sauleh Eetemadi.

Teaching Assistant 2022-2025

Iran university science and technology

- Served as Head Teaching Assistant for Data Structures and Principles of Compiler Design.
- Assisted with courses including Artificial Intelligence, Natural Language Processing, Computer Vision, Operating Systems, Programming, and Computer Architecture.
- Conducted tutorial sessions, evaluated assignments and examinations, and mentored undergraduate students.

TECHNICAL SKILLS

- Programming: Python, C++, C#
- Artificial Intelligence: Machine Learning, Deep Learning, NLP, Automatic Speech Recognition, Speech Processing, Computer Vision
- Large Language Models: LLMs, SLMs, Transformers, Fine-tuning, RAG, Prompt Engineering
- AI Frameworks: PyTorch, TensorFlow, Hugging Face, LangChain, LangGraph, MCP
- Backend: FastAPI, REST APIs, Docker
- Databases: PostgreSQL, MySQL, Elasticsearch, Qdrant
- Data Science: NumPy, Pandas, scikit-learn, Matplotlib
- Development: Git, GitHub, Linux, CI/CD

EDUCATION

University of Tehran | 2025–Present

M.Sc. in Computer Engineering — Artificial Intelligence and Robotics

Iran University of Science and Technology | 2019–2024

B.Sc. in Computer Engineering

- GPA: 3.79/4.00

CERTIFICATIONS

Machine Learning Specialization | 2024

DeepLearning.AI | [Coursera](#)

Neural Networks and Deep Learning | 2024

DeepLearning.AI | [Coursera](#)

HONOR & AWARDS

Second Place – [International Technology Olympiad](#) 2025

Text Processing and LLM Agents Track | Tehran, Iran | Two-member team,
