

Navid Sohrabi

Data Scientist | AI Engineer
navid.sohrabi1997@gmail.com | (+98)9117263080 | Tehran, Iran

navid-sohrabi1997
DoB: 1997-08-31 | Marital Status: Single

Profile Summary

Data Scientist and AI Engineer with experience developing machine-learning models, extracting insights from data, and deploying LLM applications. Combines a startup and product ownership background with hands-on engineering to identify business needs and deliver solutions from concept to production. Builds analytical tools and AI systems that support product decisions and automate business workflows.

Work Experience	
Data Scientist AI Engineer <i>Baam</i> Banking app serving 22M+ users. Identified business opportunities for AI and owned delivery from concept and prototyping through implementation and deployment. Built LLM-powered pipelines to collect and categorize 100K+ app reviews and feedback records across Baam and competitors, automating feedback classification previously handled manually by a dedicated employee. Deployed an internal feedback intelligence bot used by the CPO, product owners, PR, marketing, UX, platform leads, and Baam's director; delivered product-specific insights and issue alerts to support prioritization of bug fixes and feature requests. Developed agentic workflows to analyze competitor feedback, identifying a missing feature mentioned in one-third of analyzed negative reviews; translated findings into recommendations that informed pre-launch feature priorities. Built AI agents to analyze customer feedback and IBM Db2/Oracle production data for segmentation and management reporting, including an agent using live app-usage data to support the CPO's prioritization of product initiatives. Developing an agent-based response system to identify feedback suitable for automated replies and generate guidance grounded in product knowledge and aligned with Baam's brand tone. Technologies: PydanticAI, LlamaIndex (RAG), OpenAI models, Gemini, Ollama (Gemma, Qwen), IBM Db2, Oracle.	August 2025 – Present <i>Tehran, Iran</i>
Data Scientist ML Engineer <i>Cyberno</i> Deployed a Farsi cybersecurity chatbot using hybrid RAG and a 4B-parameter language model, answering 82% of questions successfully on a custom cybersecurity test set at ≈8 tokens/s on CPU. Developed and deployed PE-header and disassembly-based malware classifiers, achieving F1 scores of 98% and 99%, respectively. Exported models to ONNX and containerized deployment with Docker, reducing inference latency by 42% and memory usage by 28%.	January 2024 – August 2025 <i>Tehran, Iran</i>
Research Assistant – CNN Optimization <i>Shahid Beheshti University</i> Developed a TensorFlow-based fixed-point CNN framework; reduced multiplication operations by 18% through pruning with <1% accuracy loss. Accelerated framework computations 3,000× over the Python baseline using C++/OpenMP kernels on multicore CPUs.	January 2020 – June 2023 <i>Tehran, Iran</i>
Software Engineer & Product Owner <i>National Foundation of Elites</i> Delivered a five-device MVP of I-Trap, an IoT pest-management system; developed real-time sensor-to-cloud data pipelines and coordinated the product roadmap and milestones to meet delivery commitments.	September 2020 – June 2021 <i>Tehran, Iran</i>
Co-founder & Software Engineer <i>AEWS (Agriculture Early Warning System)</i> Co-founded an agricultural IoT startup and co-developed its core platform, building real-time sensor data pipelines, automated irrigation, and a dashboard for monitoring and control. Earned 1st place among 47 competing teams in Iran's IoT League; participated in accelerator discussions to explore funding opportunities.	June 2018 – June 2019 <i>Gorgan, Golestan, Iran</i>

Skills	
Programming & Data: Python, SQL, Pandas, NumPy	
LLMs & Agents: PydanticAI, LlamaIndex, agentic workflows, OpenAI models, Gemini, Ollama	
NLP & Retrieval: LLM-based text classification, embeddings, semantic similarity search, BM25, hybrid RAG	
Machine Learning: PyTorch, TensorFlow, scikit-learn, XGBoost; Transformers, CNNs, ensemble learning, knowledge distillation	
Deployment & Optimization: FastAPI, Flask, Docker, Linux, ONNX, Optuna, MLflow	
Databases & Development Tools: IBM Db2, Oracle, ChromaDB (vector database), Git	
Time Series & Forecasting: ARIMA, SARIMA, SARIMAX, statsmodels, Google TimesFM	

Education	
Master of Computer Engineering <i>University: Shahid Beheshti University</i> 2019 – 2023 Tehran, Iran GPA: 3.87 Ranked 1st of 30 students in the master's program	Bachelor of Computer Engineering <i>University: Golestan University</i> 2015 – 2019 Gorgan, Golestan, Iran GPA: 3.44

Language	
Persian English
